

I CLAIM:

1. A suitcase handle device disposed on a suitcase, and the suitcase handle device comprising:
  - a hollow seat disposed on the suitcase, a telescopic tube inserted through the hollow seat, a hollow mount disposed on the telescopic tube, a shaft, a grip, an oblong block, a spring, and a bolt,
  - a turret disposed on the hollow mount, the turret having a center aperture, a plurality of periphery grooves, and an annular groove,
  - 10 the grip having an inner wall, a bottom round hole, a threaded hole, an end groove, and an end opening communicating with the end groove, the oblong block having an end pillar and an inner protrusion,
  - 15 the shaft inserted through the center aperture of the hollow mount, the bolt inserted through the threaded hole of the grip and the annular groove of the turret,
  - the turret inserted through the bottom round hole 20 of the grip,
  - the spring and the oblong block inserted in the end groove of the grip,
  - the spring enclosing the end pillar,
  - the spring disposed between the oblong block and
  - 25 the inner wall of the grip, and

the inner protrusion inserted in one of the periphery grooves of the turret.

2. The suitcase handle device as claimed in claim 1, wherein the oblong block further has a circular hole and  
05 a pressing button is inserted in the circular hole of the oblong block.

3. The suitcase handle device as claimed in claim 1, wherein the hollow mount has an inclined upper surface.

4. The suitcase handle device as claimed in claim 1,  
10 wherein the hollow seat has a plurality of periphery recesses.
